### Earthquake

---

Stay Calm

In the event an earthquake occurs, follow these steps when shaking begins:

- **Drop** to the floor/ground and move toward the nearest wall. Make all attempts to avoid all windows, hanging objects, and items/objects that could fall.
- **Cover** your head, neck, and face. Take cover by getting under a sturdy table or desk. If there is no cover available, cover your face and head with your arms and crouch in an inside corner of the building,
- **Hold** on until the shaking stops so as not to be tossed free of your cover.
- To avoid injury, move as little as possible when trying to reach a place of safety.
- Move away from areas of storage or possible falling debris
- Move away from windows, skylights, and hanging/ tall objects that could collapse or fall over.
- Stay indoors until the shaking stops. For safety reasons, it is recommended to stay indoors until it is safe to exit the building.

Once the shaking stops:

- Stay calm and assess your immediate surroundings
- Be prepared for aftershocks that may be strong or stronger than the original earthquake
- In an evacuation is necessary, please exit the building safely and calmly by utilizing the nearest and safest exit and/or refer to the Evacuation tab in this flipchart.
- If injuries have occurred, refer to the Code White tab in this flipchart.
